

**Pt. Ravishankar Shukla University Raipur**

**Syllabus**

**M.A./M.Sc. Mathematics**  
**Semester System**

**Session: 2023-24 & onwards**

**Approved by**  
**Board of Studies in Mathematics**  
**(Meeting on 16<sup>th</sup> January 2023)**

**Programme Outcome (POs):**

By the end of M.Sc. Mathematics (2 year) programme, students will be able to communicate mathematical ideas with clarity and coherence, both written and verbally. They will be able to conduct independent research in specialized areas of mathematics, teach courses in mathematics or subjects with high mathematical content at school and college level.

**PROGRAM SPECIFIC OUTCOMES (PSOs) :** At the end of the program, the student will be able to:

- PSO1 Apply the knowledge of mathematical concepts in interdisciplinary fields.
- PSO2 Understand the nature of abstract mathematics and explore the concepts in further details.
- PSO3 Model the real-world problems in to mathematical equations and draw the inferences by finding appropriate solutions.
- PSO4 Identify challenging problems in mathematics and find appropriate solutions.
- PSO5 Pursue research in challenging areas of pure/applied mathematics.
- PSO6 Employ confidently the knowledge of mathematical software and tools for treating the complex mathematical problems and scientific investigations.
- PSO7 Effectively communicate and explore ideas of mathematics for propagation of knowledge and popularization of mathematics in society.
- PSO8 Quality national level tests like NET/GATE etc.

## Program Structure

The MA/M.Sc. Mathematics program is a two-year degree course divided into four semesters.

### M.A./M.Sc. (MATHEMATICS) (Semester-I)

Examination: Dec. 2023 & onwards

There shall be five papers. Each paper shall have 100 marks. **Overall tally of marks will be 500.**

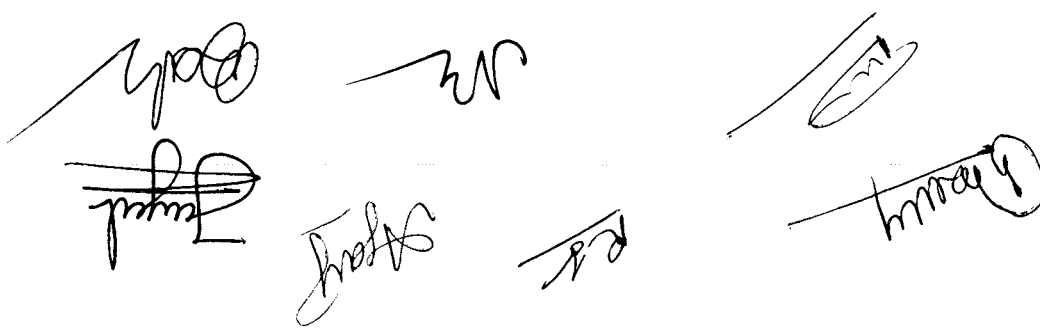

Paper Code	Description	Theory	Sessional	Practical	Total Marks
I	Advanced Abstract Algebra (I)	80	20	-	100
II	Real Analysis (I)	80	20	--	100
III	Topology	80	20	--	100
IV	Advanced Complex Analysis (I)	80	20	--	100
V	Advanced Discrete Mathematics (I)	80	20	--	100

### M.A./M.Sc. (MATHEMATICS) (Semester-II)

Examination: May-June 2024 & onwards

There shall be five theory papers. Each paper shall have 100 marks. **Overall tally of marks will be 500.**

Paper Code	Description	Theory	Sessional	Practical	Total Marks
I	Advanced Abstract Algebra (II)	80	20	-	100
II	Real Analysis (II)	80	20	--	100
III	General and Algebraic Topology	80	20	--	100
IV	Advanced Complex Analysis (II)	80	20	--	100
V	Advanced Discrete Mathematics (II)	80	20	--	100

Pap er	Cod e	Description	Theory	Session al	Prac tical	Total
<b>Compulsory Papers</b>						
I	301	Integration Theory and Functional Analysis (I)	80	20	--	100
II	302	Partial Differential Equations & Mechanics (I)	80	20	--	100
<b>Optional Papers</b>						
III	303	Fundamentals of Computer Science (Object Oriented Programming and Data Structure)	70	--	30	100
	304	Fuzzy Set Theory & Its Applications (I)	80	20	--	100
	305	Mathematical Ecology	80	20	--	100
IV	306	Operations Research (I)	80	20	--	100
	307	Wavelets (I)	80	20	--	100
V	308	Programming in C (with ANSI Features) (I)	70	--	30	100
	309	Graph Theory (I)	80	20	--	100
	310	Number Theory	80	20	--	100

There shall be five theory papers. Two compulsory and three optional. Each paper shall have 100 marks. Out of these five papers, the paper which has theory and practical both, the theory part shall have 70 marks and practical part shall have 30 marks. Overall tally of marks in theory and practical will be 500.

**M.A./M.Sc. (MATHEMATICS) (Semester-III)**

**Examination: Dec. 2023 & onwards**

Pap er	Code	Description	Theory	Sessi- onal	Practi- cal	Total
<b>Compulsory Papers</b>						
I	401	Functional Analysis (II)	80	20	--	100
II	402	Partial Differential Equations & Mechanics (II)	80	20	--	100
<b>Optional Papers</b>						
III	403	Operating System and Database Management System	70	--	30	100
	404	Fuzzy Set Theory & Its Applications (II)	80	20	--	100
	405	Mathematical Epidemiology	80	20	--	100
IV	406	Operations Research (II)	80	20	-	100
	407	Wavelets (II)	80	20	-	100
V	408	Programming in C (with ANSI Features) (II)	70	--	30	100
	409	Graph Theory (II)	80	20	--	100
	410	Cryptography	80	20	--	100

There shall be five papers. Two compulsory and three optional papers. Each paper shall have 100 marks. The paper which has theory and practical both, the theory part shall have 70 marks and practical part shall have 30 marks. **Overall** tally of marks in theory and practical will be 500.

**M.A./M.Sc. (MATHEMATICS) (Semester-IV)**  
**Examination: May-June 2024 & onwards**

*(Handwritten signatures and marks)*

M.Sc./M.A. Course (First Semester)  
PAPER - I

Advanced Abstract Algebra (I)

Max. Marks 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Demonstrate capacity for mathematical reasoning through analyzing, proving and explaining concepts from advanced algebra.

2. Understand the concept of Normal and subnormal series, solvable group, state and prove Jordan-Holder theorem.

3. Understand the concepts of fields, extension of fields and splitting fields of polynomials.

4. Identify and analyze different types of algebraic structures such as Algebraically closed fields, Splitting fields, Finite field extensions to understand and use the fundamental results in Algebra. Design, analyze and implement the concepts of Gauss Lemma, Eisenstein's irreducibility criterion, separable extensions etc.

5. Create, select and apply appropriate algebraic structures such as Galois extensions, Automorphisms of groups and fixed fields, Fundamental theorem of Galois theory to understand and use the Fundamental theorem of Algebra, solvability of polynomials.

**Contents:**

**Unit-I** Groups - Normal and Subnormal series, Composition series, Jordan-Holder theorem, Solvable groups, Nilpotent groups.

**Unit-II** Field theory- Extension fields, Algebraic and transcendental extensions, Separable and inseparable extensions.

**Unit-III** Perfect fields, Finite fields, Primitive elements, Algebraically closed fields.

**Unit-IV** Normal extensions, Automorphisms of extensions, Galois extensions, Fundamental theorem of Galois theory.

**Unit-V** Solution of polynomial equations by radicals, Insolvability of the general equation of degree 5 by radicals.

Handwritten signatures and notes at the top of the page, including names like 'Dr. Hemant Sahay', 'Dr. Jay Kumar Sharma', 'Rajesh V.', 'Dr. R. Sankaranarayanan', and 'Dr. R. Sankaranarayanan'.

**Books Recommended:**

1. P.B.Bhattacharya, S.K.Jain, S.R.Nagpaul: Basic Abstract Algebra, Cambridge University press
2. I.N.Herstein: Topics in Algebra, Wiley Eastern Ltd.
3. Quazi Zameeruddin and Surjeet Singh : Modern Algebra

**References**

2. P.M.Cohn, Algebra, Vols. I, II & III, John Wiley & Sons, 1982, 1989, 1991.
3. N.Jacobson, Basic Algebra, Vols. I, W.H. Freeman, 1980 (also published by Hindustan Publishing Company).
4. S.Lang, Algebra, 3rd edition, Addison-Wesley, 1993.
5. I.S. Luther and I.B.S. Passi, Algebra, Vol. I-Groups, Vol. II-Rings, Narosa Publishing House (Vol. I-1996, Vol. II-1999)
6. D.S.Malik, J.N.Mordeson, and M.K.Sen, Fundamentals of Abstract Algebra, Mc Graw-Hill, International Edition, 1997.
7. Vivek Sahai and Vikas Bist: Algebra, Narosa Publishing House, 1999.
8. I. Stewart, Galois theory, 2nd edition, Chapman and Hall, 1989.
9. J.P. Escotier, Galois theory, GTM Vol.204, Springer, 2001..
10. Fraleigh , A first course in Algebra Algebra, Narosa, 1982.

Handwritten signatures and initials of the authors and reviewers, including names like 'S.K. Jain', 'S.R. Nagpaul', 'P.B. Bhattacharya', and 'I.N. Herstein'.

**Real Analysis (I)**

Max. Marks 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the concept of sequences and series of functions and apply the test for their convergence.
2. Understand the concept of convergence and divergence of power series and apply Abel's and Tauber's theorems.
3. Understand the concept of functions of several variables and properties of sets of vectors in  $\mathbb{R}^n$ .
4. Understand the concept of maxima and minima of real valued functions from  $\mathbb{R}$  to  $\mathbb{R}$  and from  $\mathbb{R}^n$  to  $\mathbb{R}$ .
5. Understand the concept of Integration theory that is closely related to the theory of Euclidean spaces and derivatives of functions of several variables.

**Contents:**

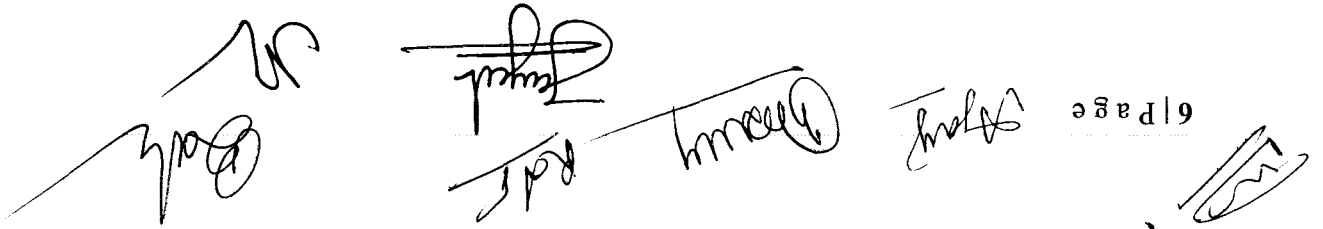

**Unit-I** Sequences and series of functions, pointwise and uniform convergence, Cauchy criterion for uniform convergence, Weierstrass M-test, Abel's and Dirichlet's tests for uniform convergence, uniform convergence and continuity, uniform convergence and differentiation, Weierstrass approximation theorem.

**Unit-II** Power series, uniqueness theorem for power series, Abel's and Tauber's theorems, Rearrangements of terms of a series, Riemann's theorem.

**Unit-III** Functions of several variables, linear transformations, Derivatives in an open subset of  $\mathbb{R}^n$ , Chain rule, Partial derivatives, interchange of the order of differentiation, Derivatives of higher orders, Taylor's theorem, Inverse function theorem, Implicit function theorem.

**Unit-IV** Jacobians, extremum problems with constraints, Lagrange's multiplier method, Differentiation of integrals.

**Unit-V** Partitions of unity, Differential forms, Stoke's theorem.

**Recommended Books:**

## Topology

Max. Marks 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the concept of countable and uncountable sets and its properties.
2. Understand the concept of topological spaces and its examples, bases, sub-bases, subspaces and relative topology.
3. Understand the concept of countable, separable spaces and separation axioms with their characterizations and basic properties.
4. Understand the concept and properties of compactness, continuous functions.
5. Understand the concept and properties of countable compactness in metric spaces.

### Contents:

- Unit-I** Countable and uncountable sets. Infinite sets and the Axiom of Choice. Cardinal numbers and its arithmetic. Schroeder-Bernstein theorem. Cantor's theorem and the continuum hypothesis. Zorn's lemma, well-ordering theorem.
- Unit-II** Definition and examples of topological spaces. Bases and sub-bases. Subspaces and relative topology. Alternate methods of defining a topology in terms of terms of Kuratowski Closure Operator and Neighbourhood Systems. Continuous functions and homeomorphism.
- Unit-III** First and Second Countable spaces. Lindelof's theorems. Separable spaces. Second countability and separability. Separation axioms; their characterizations and basic properties. Urysohn's lemma, Tietze extension theorem.

- Unit-IV** Compactness. Continuous functions and compact sets. Basic properties of Compactness. Compactness and finite intersection property. Sequentially and countably compact sets. Local compactness and one point compactification. Stone-Cech compactification.

- Unit-V** Compactness in metric spaces. Equivalence of compactness, countable compactness and sequential compactness in metric space.

Handwritten signatures and initials at the bottom of the page, including a large signature on the left, a signature in the center, and a signature on the right.

## Complex Analysis (I)

Max. Marks 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the fundamental concept of complex analysis. Evaluate complex integrals with the help of theorems mentioned in the contents. Identify singularities.
2. Understand the concept of maximum modulus principle, and Inverse function theorem.
3. Understand the concept of residues and apply Cauchy's residue theorem to evaluate integrals.
4. Understand the concept of conformal mappings, bilinear transformations, their properties and classifications.
5. Understand the concept about the spaces of analytic functions.

### Contents:

**Unit-I** Complex integration, Cauchy-Goursat Theorem. Cauchy's integral formula. Higher order derivatives. Morera's Theorem. Cauchy's inequality and Liouville's theorem. The fundamental theorem of algebra. Taylor's theorem. Laurent's series. Isolated singularities. Meromorphic functions.

**Unit-II** Maximum modulus principle. Schwarz lemma. The argument principle. Rouché's theorem Inverse function theorem.

**Unit-III** Residues. Cauchy's residue theorem. Evaluation of integrals. Branches of many valued functions with special reference to  $\arg z$ ,  $\log z$  and  $z^a$ .

**Unit-IV** Bilinear transformations, their properties and classifications. Definitions and examples of conformal mappings.

**Unit-V** Spaces of analytic functions. Hurwitz's theorem. Montel's theorem Riemann mapping theorem.

### Recommended Books:

M.Sc./M.A. Course (First Semester)  
PAPER-V

Advanced Discrete Mathematics (I)

Max. Marks 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the concept of formal Logic, quantifiers, predicates and their uses in truth tables.
2. Understand the concept of homomorphism of semi groups and monoids.
3. Understand the concept of lattices as algebraic systems, Boolean algebras as lattices.
4. Apply Boolean Algebra to switching theory (using AND, OR & NOT gates).
5. Understand grammars and languages.

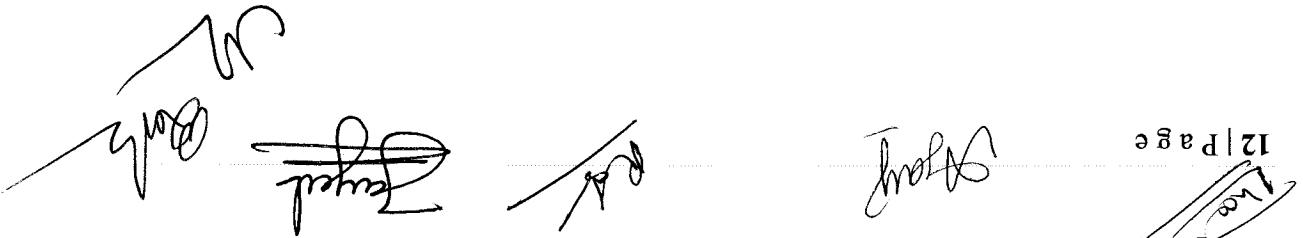

**Contents:**

**Unit-I** Formal Logic-Statements. Symbolic Representation and Tautologies. Quantifiers, Predicates and Validity. Propositional Logic. Semigroups & Monoids-Definitions and Examples of Semigroups and monoids (including those pertaining to concatenation operation).

**Unit-II** Homomorphism of semigroups and monoids. Congruence relation and Quotient Semigroups. Subsemigroup and submonoids. Direct Products. Basic Homomorphism Theorem.

**Unit-III** Lattices-Lattices as partially ordered sets. Their properties. Lattices as Algebraic Systems. Sublattices, Direct products, and Homomorphisms. Some Special Lattices e.g., Complete, Complemented and Distributive Lattices. Boolean Algebras-Boolean Algebras as Lattices. Various Boolean Identities. The Switching Algebra example. Subalgebras,

**Unit-IV** Direct Products and Homomorphisms. Join-Irreducible elements, Atoms and Minterms. Boolean Forms and Their Equivalence. Minterm Boolean Forms, Sum of Products Canonical Forms. Minimization of Boolean Functions. Applications of Boolean Algebra to Switching Theory (using AND, OR & NOT gates). The Karnaugh Map Method.

**Unit-V** Grammars and Languages-Phrase-Structure Grammars. Rewriting Rules. Derivations. Sentential Forms. Language generated by a Grammar. Regular, Regular, Context-Free, and Context Sensitive Grammars and Languages. Regular sets, Regular Expressions. Notions of Syntax Analysis, Polish Notations. Conversion of Infix Expressions to Polish Notations. The Reverse Polish Notation.

The image shows several handwritten signatures and initials in black ink. From left to right, there are: a signature that appears to be 'Rohit', a signature that appears to be 'M', a signature that appears to be 'R.P.', a signature that appears to be 'Sujal', a signature that appears to be 'Shrey', and a signature that appears to be 'L.P.'.

M.Sc./M.A. Course (Second Semester)  
PAPER-I  
Advanced Abstract Algebra (II)

Max. Marks 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the concepts of modules, Noetherian and artinian modules. Prove Wedderburns theorem on finite division rings.
2. Discuss algebra of linear transformations and characteristics roots.
3. Find the metrics corresponding to linear transformation and different canonical forms like triangular and Jordan canonical form etc.
4. Prove and apply the Primary Decomposition Theorem, and the criterion for diagonalisability.
5. Find rational canonical form and generalized Jordan form over any field.

**Contents:**

**Unit-I** Modules - Cyclic modules. Simple modules. Semi-simple modules. Schuler's Lemma. Free modules. Noetherian and artinian modules and rings-Hilbert basis theorem. Wedderburn Artin theorem. Uniform modules, primary modules, and Noether-Lasker theorem.

**Unit-II** Linear Transformations - Algebra of linear transformation, characteristic roots, matrices and linear transformations.

**Unit-III** Canonical Forms - Similarity of linear transformations. Invariant subspaces. Reduction to triangular forms. Nilpotent transformations. The Index of nilpotency. Invariants of a nilpotent transformation. The primary decomposition theorem. Jordan blocks and Jordan forms.

**Unit-IV** Smith normal form over a principal ideal domain and rank. Fundamental structure theorem for finitely generated modules over a Principal ideal domain and its applications to finitely generated abelian groups.

**Unit-V** Rational canonical form. Generalised Jordan form over any field.

- Books Recommended:**

**Real Analysis (II)**

Max. Marks 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the concept of Riemann-Stieltjes integral and apply it to evaluate definite integrals arising in different fields of science and engineering.
2. Understand development of measure and integration theory and Borel, Lebesgue measurability.
3. Compare integration theory of Lebesgue and Riemann with examples and counter examples.
4. Understand the concept and properties of functions of bounded variation.
5. Understand the concept of  $L^p$ -spaces and convergence in measure.

**Contents:**

**Unit-I** Definition and existence of Riemann-Stieltjes integral, Properties of the Integral, integration and differentiation, the fundamental theorem of Calculus, integration of vector-valued functions, Uniform convergence and Riemann-Stieltjes integration, Rectifiable curves.

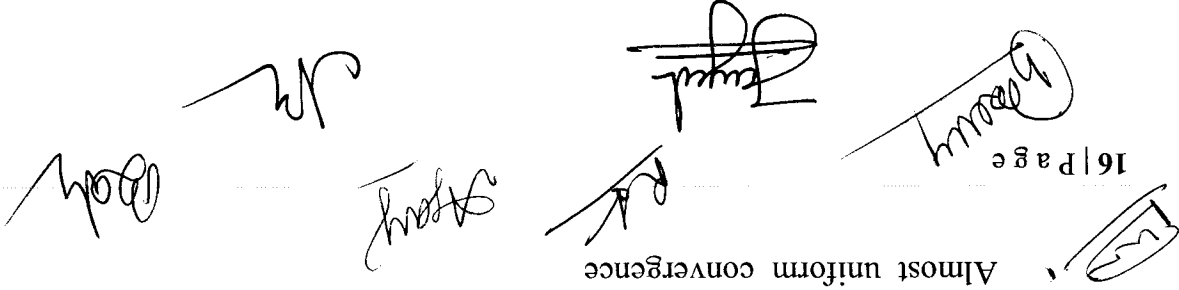

**Unit-II** Lebesgue outer measure, Measurable sets, Regularity, Measurable functions, Borel and Lebesgue measurability, Non-measurable sets, Integration of Non-negative functions, The General integral, Integration of Series.

**Unit-III** Measures and outer measures, Extension of a measure, Uniqueness of Extension, Completion of a measure, Measure spaces, Integration with respect to a measure, Reimann and Lebesgue Integrals.

**Unit-IV** The Four derivatives, Lebesgue Differentiation Theorem, Differentiation and Integration, Functions of Bounded variation.

**Unit-V** The  $L^p$ -spaces, Convex functions, Jensen's inequality, Hölder and Minkowski inequalities, Completeness of  $L^p$ , Convergence in Measure, Almost uniform convergence

  16. Inder K. Rana, An Introduction to Measure and Integration, Norosa Publishing House, Delhi, 1997.

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the concept of Tychonoff product topology and related concepts.
2. Understanding the connectedness, compactness and countability properties in product space.
3. Understand embedding, metrization and its related theorems.
4. Understand the concept of net, filter and its various topological properties and their inter-relations.
5. Understand fundamental group and covering spaces.

**Contents:**

**Unit-I** Tychonoff product topology in terms of standard sub-base and its characterizations. Projection maps. Separation axioms and product spaces.

**Unit-II** Product spaces. Connectedness and product spaces. Compactness and product spaces (Tychonoff's theorem). Countability and product spaces.

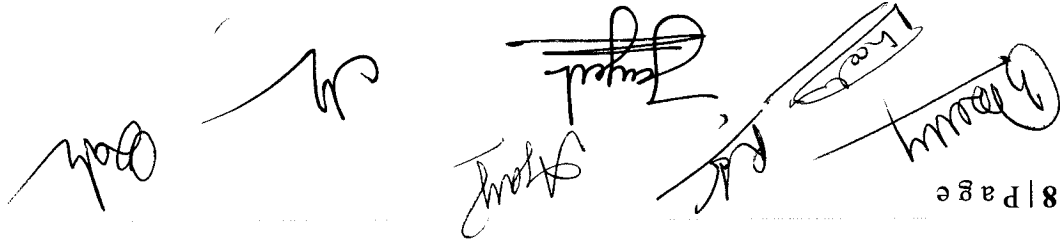

**Unit-III** Embedding and metrization. Embedding lemma and Tychonoff embedding. The Urysohn metrization theorem. Metrization theorems and Paracompactness-Local finiteness. The Nagata-Smirnov metrization theorem. Paracompactness. The Smirnov metrization theorem.

**Unit-IV** Nets and filter. Topology and convergence of nets. Hausdorffness and nets. Compactness and nets. Filters and their convergence. Canonical way of converting nets to filters and vice-versa. Ultra-filters and Compactness.

**Unit-V** The fundamental group and covering spaces-Homotopy of paths. The fundamental group. Covering spaces. The fundamental group of the circle and the fundamental theorem of algebra

Handwritten signatures and initials in the right margin of the page, including names like 'Rajul', 'R.K.', 'M.', 'S.S.', and 'A.K.'.

**Advanced Complex Analysis (II)**

Max. Marks 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the concept of Weierstrass' factorisation theorem, Riemann Zeta function, Gamma function and its properties..
2. Understand the concept of Analytic Continuation and its properties. Gain knowledge of power series of analytic function.
3. Understand the concept and properties of Harmonic functions on a disc.
4. Understand the concept of Canonical products, entire function and exponent of Convergence.
5. Understand the advanced concepts of Analytic functions and its properties.

**Contents:**

**Unit-I** Weierstrass' factorisation theorem. Gamma function and its properties. Riemann Zeta function. Riemann's functional equation. Runge's theorem. Mittag-Leffler's theorem.

**Unit-II** Analytic Continuation. Uniqueness of direct analytic continuation. Uniqueness of analytic continuation along a curve. Power series method of analytic continuation Schwarz Reflection Principle. Monodromy theorem and its consequences.

**Unit-III** Harmonic functions on a disk. Harnack's inequality and theorem. Dirichlet Problem. Green's function.

**Unit-IV** Canonical products. Jensen's formula. Poisson-Jensen formula. Hadamard's three circles theorem. Order of an entire function. Exponent of Convergence. Borel's theorem. Hadamard's factorization theorem.

**Unit-V** The range of an analytic function. Bloch's theorem. The Little Picard theorem. Schottky's theorem. Montel Caratheodory and the Great Picard theorem. Univalent functions. Bieberbach's conjecture (Statement only) and the "1/4-theorem.

*Handwritten signatures and scribbles at the top of the page.*

**Recommended Books:**

The image shows several handwritten signatures and initials corresponding to the authors in the references above. From left to right, they are: a signature that appears to be 'Priestly', a signature that appears to be 'Conway', a signature that appears to be 'Ahlfors', a signature that appears to be 'Lang', a signature that appears to be 'Fuchs', a signature that appears to be 'Hille', a signature that appears to be 'Rudin', a signature that appears to be 'Saks and Zygmund', a signature that appears to be 'Titchmarsh', a signature that appears to be 'Veech', a signature that appears to be 'Ponnusamy', and a signature that appears to be 'Sarason'.

Max. Marks 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the basic concept and properties in Graph Theory .
2. Understand Trees and its properties. Apply Kruskal's.
3. Apply Dijkstra's Algorithm and Warshall's Algorithm.
4. Understand the concept of Finite State Machines.
5. Understand Deterministic, Non-deterministic Finite Automata, Moore and mealy Machines.

**Contents:**

**Unit-I** Graph Theory-Definition of (Undirected) Graphs, Paths, Circuits, Cycles, & Subgraphs. Induced Subgraphs. Degree of a vertex. Connectivity. Planar Graphs and their properties. Trees. Euler's Formula for connected planar Graphs. Complete & Complete Bipartite Graphs. Kuratowski's Theorem (statement only) and its use.

**Unit-II** Spanning Trees, Cut-sets, Fundamental Cut-sets, and Cycle. Minimal Spanning Trees and Kruskal's Algorithm. Matrix Representations of Graphs. Euler's Theorem on the Existence of Eulerian Paths and Circuits. Directed

**Unit-III** Graphs. In degree and Out degree of a Vertex. Weighted undirected Graphs. Dijkstra's Algorithm.. strong Connectivity & Warshall's Algorithm. Directed Trees. Search Trees. Tree Traversals.

**Unit-IV** Introductory Computability Theory-Finite State Machines and their Transition Table Diagrams. Equivalence of finite State Machines. Reduced Machines. Homomorphism.

**Unit-V** Finite Automata. Acceptors. Non-deterministic Finite Automata and equivalence of its power to that of Deterministic Finite Automata. Moore and mealy Machines. Turing Machine and Partial Recursive Functions. The Pumping Lemma. Kleene's Theorem.

The bottom right corner of the page contains several handwritten signatures and initials. From left to right, there is a large, stylized signature that appears to be 'M. Deo'. To its right are two smaller signatures, one of which is 'K.L.P. Mishra'. Further right is a signature that looks like 'N. Chandrashekararan'. At the top right of this section is a circled signature that reads 'Mishra'. Below the 'M. Deo' signature is a small, scribbled mark.

M.Sc./M.A. Course (Third Semester)

PAPER - I

Integration Theory and Functional Analysis (I)

Max. Marks 80

Learning Outcomes: At the end of the course, the students will be able to :

1. Understand the concept of Signed measure and its properties, Caratheodory's extension measure theory.
2. Understand modern theory of measure and integration.
3. Understand measure theory with respect to continuous functions, regularity of measures on locally compact spaces.
4. Understand finite dimensional normed linear and its basic properties.
5. Understand the concept of weak convergence and dual spaces.

Contents:

Integration Theory:

**Unit-I** Signed measure, Hahn decomposition theorem, mutually singular measures, Radon-Nikodym theorem, Lebesgue decomposition, Riesz representation theorem, Extension theorem (Caratheodory).

**Unit-II** Lebesgue-Stieltjes integral, product measures, Fubini's theorem, Differentiation and Integration, Decomposition into absolutely

continuous and singular parts.

**Unit-III** Baire sets, Baire measure, continuous functions with compact support, Regularity of measures on locally compact spaces, Integration of continuous functions with compact support, Riesz-Markoff theorem.

Functional Analysis :

**Unit-IV** Normed linear spaces, Banach spaces and examples, Quotient space of normed linear spaces and its completeness, equivalent norms, Riesz Lemma, basic properties of finite dimensional normed linear spaces and compactness.

**Unit-V** Weak convergence and bounded linear transformations, normed linear spaces of bounded linear transformations, dual spaces with examples.

**Partial Differential Equations and Mechanics (I)**

Max. Marks 80

- Learning Outcomes:** At the end of the course, the students will be able to :
1. Understand classification of partial differential equations in higher dimension.
  2. Formulate and solve of PDEs like heat equation, initial value problem etc.
  3. Understand basic concept related to discrete and continuous mechanical system.
  4. Describe and understand the motion of a mechanical system using Poisson formalism.
  5. Understand and evaluate attraction and potential in the problem related to rod, disc, spherical shells and sphere.

**Contents:**

**Partial Differential Equations**

- Unit-I** Examples of PDE. Classification. Transport Equation-Initial value Problem. Non-homogeneous Equation. Laplace's Equation-Fundamental Solution, Mean Value Formulas, Properties of Harmonic Functions, Green's Function, Energy Methods.
- Unit-II** Heat Equation-Fundamental Solution, Mean Value Formula, Properties of Solutions, Energy Methods, Wave Equation-Solution by Spherical Means, Non-homogeneous Equations, Energy Methods.

**Analytical Dynamics:**

- Unit-III** Generalized coordinates. Holonomic and Non-holonomic systems, Scleronomic and Rheonomic systems. Generalized potential. Lagrange's equations of first kind. Lagrange's equations of second kind. Uniqueness of solution. Energy equation for conservative fields. Hamilton's variables. Donkin's theorem. Hamilton canonical equations. Cyclic coordinates. Routh's equations.

*Handwritten signature*

*Handwritten signature*

*Handwritten signature*

*Handwritten signature*

*Handwritten signature*

**Unit-IV** Poisson's Bracket, Poisson's Identity, Jacobi-Poisson Theorem. Motivating problems of calculus of variations, Shortest distance, Minimum surface of revolution, Brachistochrone problem, Isoperimetric problem, Geodesic, Fundamental lemma of calculus of variations. Euler's equation for one dependent function and its generalization to (1) 'n' dependent functions, (ii) higher order derivatives. Conditional extremum under geometric constraints and under integral constraints.

### Gravitation:

**Unit-V** Attraction and potential of rod, disc, spherical shells and sphere. Surface integral of normal attraction (application & Gauss' theorem). Laplace and Poisson equations. Work done by selfattracting systems. Distributions for a given potential. Equipotential surfaces. Surface and solid harmonics. Surface density in terms of surface harmonics.

**Fundamentals of Computer Science-Theory and Practical**  
**(Object Oriented Programming and Data Structure)**

Max. Marks. 100

(Theory-70+Practical-30)

**Learning Outcomes:** At the end of the course, the students will be able to :

6. Understand fundamentals of OOPs using C++ programming language.
7. Evaluate and apply the concepts of inheritance and virtual functions
8. Understand data structure, analysis of algorithms, list, stacks and queues.
9. Understand trees, binary trees, search tree implementations.
10. Apply various sorting techniques such as insertion sort, Shell sort, quick-sort, heap sort and their analysis.

**Contents:**

**Unit-I** Object Oriented Programming-Classes and Scope, nested classes, pointer class members; Class initialization, assignment and destruction.

**Unit-II** Overloaded functions and operators; Templates including class templates; class inheritance and virtual functions.

**Unit-III** Data Structures-Analysis of algorithms, q, W, O, o, w notations ; Sequential and linked representations, Lists, Stacks, and queues;

**Unit-IV** Trees: Binary tree- search tree implementation, B-tree (concept only);

**Unit-V** Sorting: Insertion sort, shell sort, quick-sort, heap sort and their analysis; Hashing-open and closed.

Fuzzy Set Theory and Its Applications (I)**

Max Marks – 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the various concept in fuzzy sets.
2. Understand the extension principle and operations on fuzzy sets.
3. Understand the fuzzy relations on Fuzzy sets.
4. Understand the fuzzy equivalence relations and relational equations.
5. Explain fuzzy measure and possibility theory.

**Contents:**

**UNIT-I** Fuzzy sets-Basic definitions,  $\alpha$ -level sets, Convex fuzzy sets, Basic operations on fuzzy sets, Types of fuzzy sets, Cartesian products, Algebraic products, Bounded sum and difference, t-norms and t-conorms.

**UNIT-II** The Extension Principle- The Zadeh's extension principle, Image and inverse image of fuzzy sets, Fuzzy numbers, Elements of fuzzy arithmetic.

**UNIT-III** Fuzzy Relations on Fuzzy sets, Composition of Fuzzy relations, Min-Max composition and its properties.

**UNIT-IV** Fuzzy equivalence relations, Fuzzy compatibility relations, Fuzzy relation equations, Fuzzy graphs, Similarity relation.

**UNIT-V** Possibility Theory-Fuzzy measures, Evidence theory, Necessity measure, Possibility measure, Possibility distribution, Possibility theory and fuzzy sets, Possibility theory versus probability theory.

Max. Marks - 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Finding the equilibria of a single-population model and their stability in continuous and discrete environment.
2. Find the fixed points and their stability in nonlinear dynamical systems.
3. Analysis and stability of equilibria of nonlinear systems in more than two variables
4. Make the mathematical model of different situations in population dynamics, ecology etc.
5. Relate mathematical notions with biological phenomena.

**Contents:**

**Part-A: Simple Single Species Models**

**UNIT-I**

**Continuous Population Models:** Phase plane analysis of ODE. Exponential Growth model, the Logistic Population Model, qualitative analysis, Harvesting in Population Models, Constant-yield harvesting, constant-effort harvesting, a case study of eutrophication of a lake.

**UNIT-II**

**Discrete Population Models:** Linear Models, graphical solution of difference equations, equilibrium analysis, period-doubling and chaotic behavior, discrete-time metered models, two-age group model and delayed recruitment, a case study of oscillation in flour beetle populations.

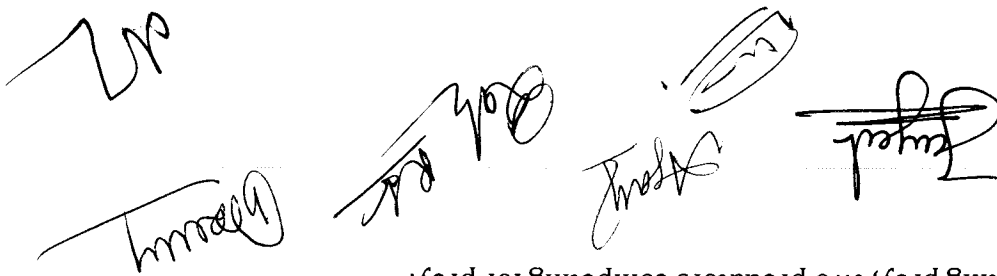

**Part-B : Models for interacting species**

**UNIT-III**

**Introduction and Mathematical preliminaries:** The Lotka-Volterra equations, the chemostat, equilibria and linearization, qualitative solutions of linear systems, periodic solutions and limit cycles, models for giving up smoking and retaining of workers by their peers.

**UNIT-IV**

**Continuous Models for Two Interacting Populations:** Species in competitions, Predator-Prey system, Kolmogorov Models, Mutualism, The community matrix, the nature of interactions between species, invading species and coexistence, a predator and two competing prey, two predators competing for prey.

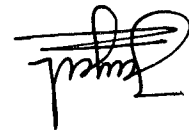

**UNIT-V**  
**Harvesting in Two-Species Models:** Harvesting of species in competition, Harvesting of predator-prey systems, some economic aspects of harvesting, optimization of harvesting returns.

**Text Book:**

M.Sc./M.A. Course (Third Semester)  
PAPER -IV (A)  
Operations Research (I)

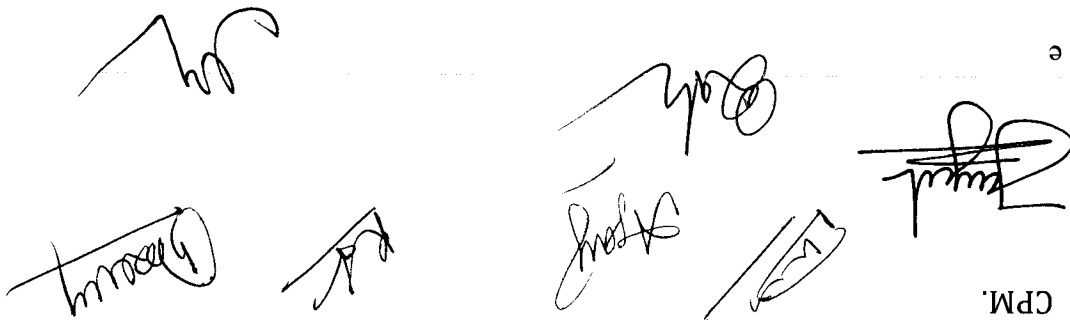

Max. Marks 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the concept of operations research and its scope. Formulate real life problems into linear programming problem and understand the simplex method.
2. Analyze duality, sensitivity in linear programming problem.
3. Understand theoretical foundation and implementation of optimization techniques available in the scientific literature.
4. Find the optimal solutions of transportation and assignment problems.
5. Understand the construction of networks of project and optimal scheduling using CPM and PERT. Find the optimal solution for networking problems.

**Contents:**

- Unit-I** Operations Research and its Scope. Necessity of Operations Research in Industry. Linear Programming-Simplex Method. Theory of the Simplex Method.
- Unit-II** Duality and Sensitivity Analysis. Other Algorithms for Linear Programming-Dual Simplex Method.
- Unit-III** Parametric Linear Programming. Upper Bound Technique. Interior Point Algorithm. Linear Goal Programming.
- Unit-IV** Transportation and Assignment Problems.
- Unit-V** Network Analysis-Shortest Path Problem. Minimum Spanning Tree Problem. Maximum Flow I Problem. Minimum Cost Flow Problem. Network Simplex Method. Project Planning and Control I with PERT-CPM.

Handwritten signatures and initials of the examiners, including names like 'Ravi', 'Suresh', 'Anand', 'Raj', and 'Sudhakar'.

 (ii) Optimisation Modelling with LINGO by Unus Schrage.

More details available on the Related Book page York, 1979.

The bottom of the page features several handwritten signatures and initials. From left to right, there is a signature that appears to be 'M', a signature that looks like 'R.K.', a signature that is partially obscured and possibly 'S. Hira', and a large, stylized signature that could be 'Prem Kumar Gupta'. There are also some other scribbles and initials scattered around.

M.Sc./M.A. Course (Third Semester)  
PAPER-IV (B)  
Wavelets (I)

Max Marks - 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the basic concept of wavelet theory and ways of constructing wavelets.
2. Understand and apply unitary folding operators and the smooth projections.
3. Understand the concept of multi-resolution analysis and construction of compactly supported wavelets.
4. Understand the characterization of Lemarie-Meyer wavelets, Franklin wavelets and spline wavelets on the real line.
5. Understand and apply decomposition and reconstruction algorithms for wavelets.

**Contents:**

**Unit-I.** Preliminaries-Different ways of constructing wavelets-Orthonormal bases generated by a single function: the Balian-Low theorem. Smooth projections on  $L^2(\mathbb{R})$ .

**Unit-II.** Local sine and cosine bases and the construction of some wavelets. The unitary folding operators and the smooth projections.

**Unit-III.** Multiresolution analysis and construction of wavelets. Construction of compactly supported wavelets and estimates for its smoothness. Band limited wavelets.

**Unit-IV.** Orthonormality. Completeness. Characterization of Lemarie-Meyer wavelets and some other characterizations. Franklin wavelets and Spline wavelets on the real line.

**Unit-V.** Orthonormal bases of piecewise linear continuous functions for  $L^2(T)$ .  
 Orthonormal bases of periodic splines. Periodization of wavelets  
 defined on the real line.

Max. Marks. 100

(Theory-70 + Practical-30)

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understanding the basic structure, operators and statements of C language.
2. Implementing simple C program, data types, operators and console I/O functions.
3. Understand the decision control statements, loop control statements and case control statements.
4. Understand the concept of operator and expression in C.
5. Understand the declaration, implementation of array, pointers, function and structures.

**Contents:**

**Unit-I** An overview of programming, Programming language, Classification, C Essentials-Program Development, Functions, Anatomy of a C Function, Variables and Constants, Expressions, Assignment Statements, Formatting Source Files, Continuation Character, The Preprocessor.

**Unit-II** Scalar Data Types-Declarations, Different Types of Integers, Different kinds of Integer Constants, Floating-Point Types, Initialization, Mixing Types, Explicit Conversions-Casts, Enumeration Types, The Void Data Type, Typedefs, Finding the Address of an object, Pointers, Nested Loops, The break and continue Statements, The goto statement, Infinite Loops.

**Unit-III** Operators and Expressions-Precedence and Associativity, Unary Plus and Minus operators, Binary Arithmetic Operators, Arithmetic Assignment Operators, Increment and Decrement Operators, Comma Operator, Relational Operators, Logical Operators, Bit - Manipulation Operators, Bitwise Assignment Operators, Cast Operator, Size of Operators, Conditional Operator, Memory Operators.

**Unit-V** Arrays -Declaring an Array, Arrays and Memory, Initializing Arrays, Encryption and Decryption.

Time Duration - 3 Hrs.

M.Sc./M.A. Course (Third Semester)  
PAPER-V (B)  
Graph theory (I)

Max. Marks – 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the concept of topological operations on graphs.
2. Understand the concept of matrices and vector spaces in graph theory.
3. Understand the concept of coloring packing and covering in graph theory.
4. Understand the concept of combinatorial formulations in graph theory.
5. Understand the concept of perfect graphs, SPGC in graph theory.

**Contents:**

Unit-I: Operations on graphs, matrices and vector spaces: Topological operations, Homeomorphism, homomorphism, contractions, derived graphs, Binary operations.

Unit-II: Matrices and vector spaces: The adjacency matrix, The determinant and the spectrum, Spectrum properties, The incidence matrix, cycle space and Bond space, Cycle bases and cycle graphs.

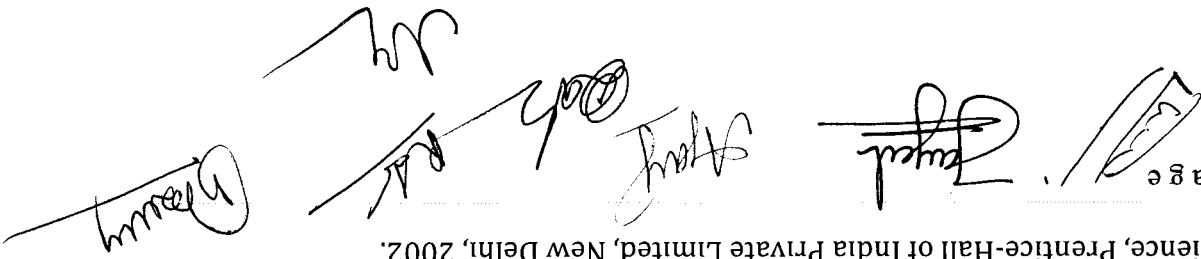

Unit-III: Colouring packing and covering: Vertex coverings, critical graphs, Girth and chromatic number, uniquely colourable graphs, edge-colourings, Face colourings and Beyond, The achromatic and the Adjoint Numbers.

Unit-IV: Combinatorial formulations: Setting up of combinatorial formulations, the classic pair of duals, Gallai, Norman-Rabin Theorems, Clique parameters, The Rosenfeld Numbers.

Unit-V: Perfect Graphs: Introduction to the "SPGC", Triangulated (Chordal) graphs, Comparability graphs, Interval graphs, permutation graphs, circular arc graphs, split graphs, weakly triangulated graphs.

**REFERENCES :**

5. Ronald Gould and Benjamin Cummins, Graph Theory, California.
6. Narsingh Deo, Graph Theory with applications to Engineering and Computer Science, Prentice-Hall of India Private Limited, New Delhi, 2002.

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Apply the knowledge of Number theory to attain a good mathematical maturity and enables to build mathematical thinking and skill.
2. Learn about some important results in the theory of numbers including the prime number theorem, Chinese remainder theorem, Wilson's theorem, Fermat's theorem and their consequences.
3. Learn about number theoretic functions, modular arithmetic and their applications.
4. Familiarise with modular arithmetic and find primitive roots of prime and composite numbers.
5. Know about Diophantine equations and Elliptic curves.

**Contents:**

Unit-I: Divisibility and Distribution of prime numbers: division algorithm, Euclidean Algorithm, Primes, Fundamental theorem of arithmetic, distribution of primes, numbers of special forms

Unit-II: Congruences: basic definitions and properties, linear congruences, Chinese Remainder Theorem, Fermat's theorem, Wilson's theorem, Euler's theorem.

Unit-III: Number theoretic functions: Greatest integer function, Arithmetic Functions, divisor function, the Mobius Inversion formula, recurrence function.

Unit-IV: Primitive roots and Quadratic residues: primitive roots, theory of indices, quadratic residues, Euler's criterion, quadratic reciprocity, Legendre and Jacobi symbol, Binary Quadratic Forms

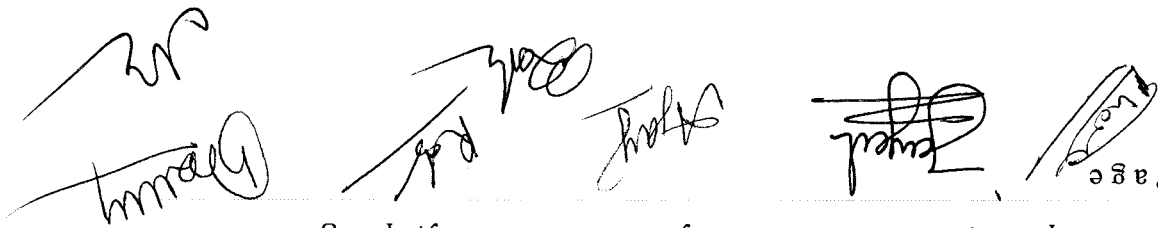

Unit-V: Diophantine equations: linear Diophantine equations, Pythagorean triples, Fermat's last theorem, Elliptic Curves, Pell's equation, Continued Fractions, Farey fraction.

M.Sc./M.A. Course (Fourth Semester)  
PAPER - I  
Functional Analysis (II)

Max. Marks 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the concept of uniform boundedness in normed linear spaces and Banach spaces.
2. Understand and apply fundamental theorems in normed linear spaces.
3. Understand the concept of Inner product spaces, Hilbert spaces, orthogonality and its properties.
4. Explain the concept of projection and reflexivity of Hilbert spaces.
5. Understand and apply general properties of linear operators in Hilbert space.

**Contents:**

- Unit-I** Uniform boundedness theorem and some of its consequences. Open mapping and closed graph theorems.
- Unit-II** Hahn-Banach theorem for real linear spaces, complex linear spaces and normed linear spaces. Reflexive spaces. Weak Sequential Compactness. Compact Operators. Solvability of linear equations in Banach spaces. The closed Range Theorem.
- Unit-III** Inner product spaces. Hilbert spaces. Orthogonal Sets. Bessel's inequality. Complete orthonormal sets and Parseval's identity.
- Unit-IV** Structure of Hilbert spaces. Projection theorem. Riesz representation theorem. Adjoint of an operator on a Hilbert space. Reflexivity of Hilbert spaces.
- Unit-V** Self-adjoint operators, Positive, projection, normal and unitary operators. Abstract variational boundary-value problem. The generalized Lax-Milgram theorem.

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand nonlinear first order partial differential equation and its classification.
2. Understand representation of solution, transforms, and potential function.
3. Understand asymptotic and power series.
4. Understand the concept of Hamiltonian's principle and canonical transformations.
5. Understand and apply methods for Lagrange and Poisson brackets.

**Contents:**

### Partial Differential Equations

**Unit-I** Nonlinear First Order PDE-Complete Integrals, Envelopes, Characteristics, Hamilton Jacobi Equations (Calculus of Variations, Hamilton's ODE, Legendre Transform, Hopf-Lax Formula, Weak Solutions, Uniqueness), Conservation Laws (Shocks, Entropy Condition, Lax-Oleinik formula, Weak Solutions, Uniqueness, Riemann's Problem, Long Time Behaviour)

**Unit-II** Representation of Solutions-Separation of Variables, Similarity Solutions (Plane and Travelling Waves, Solitons, Similarity under Scaling), Fourier and Laplace Transform, Hopf-Cole Transform, Hodograph and Legendre Transforms, Potential Functions.

**Unit-III** Asymptotics (Singular Perturbations, Laplace's Method, Geometric Optics, Stationary Phase, Homogenization), Power Series (Non-characteristic Surfaces, Real Analytic Functions, Cauchy-Kovalevskaya Theorem).

*(Handwritten signatures and marks)*

## Analytical Dynamics:

**Unit-IV** Hamilton's Principle. Principle of least action. Poincare Cartan Integral invariant. Whittaker's equations. Jacobi's equations. Lee Hwa Chung's theorem, canonical transformations and properties of generating functions.

**Unit-V** Hamilton-Jacobi equation. Jacobi theorem. Method of separation of variables. Lagrange Brackets. Condition of canonical character of a transformation in terms of Lagrange brackets and Poisson brackets, invariance of Lagrange brackets and Poisson brackets under canonical transformations.

PAPER-III (A)  
Operating System and Database Management System  
- Theory and Practical

Max. Marks. 100  
(Theory-70 + Practical-30)

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the role of database system, its architecture and data modeling
2. Understand the concept of relational algebra and relational calculus.
3. Use SQL DML/DL commands.
4. Understand operating systems.
5. Learn I/O management.

**Contents:**

**Unit-I** Database Systems-Role of database systems, database system architecture and data modeling.

**Unit-II** Introduction to relational algebra and relational calculus.

**Unit-III** Introduction to SQL: Basic features including views; Integrity constraints; Database design-normalization up to BCNF.

**Unit-IV** Operating Systems- Overview of operating system, user interface, processor management, memory management.

**Unit-V** I/O management, concurrency and Security, network and distributed systems.

**Books Recommended :**

M.Sc./M.A. Course (Fourth Semester)  
PAPER-III (B)  
Fuzzy Set Theory & Its Applications (II)

Max Marks – 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand fuzzy logic and fuzzy quantifiers.
2. Understand the approximate reasoning.
3. Understand the fuzzy control and fuzzification..
4. Understand the concept of decision making in fuzzy environment.
5. Understand and solve fuzzy linear programming problems.

**Contents:**

- Unit-I** Fuzzy Logic-An overview of classical logic, Multivalued logics, Fuzzy propositions. Fuzzy quantifiers. Linguistic variables and hedges. Inference from conditional fuzzy propositions, the compositional rule of inference.
- Unit-II** Approximate Reasoning-An overview of Fuzzy expert system. Fuzzy implications and their selection. Multiconditional approximate reasoning. The role of fuzzy relation equation.
- Unit-III** An introduction to Fuzzy Control-Fuzzy controllers. Fuzzification. Defuzzification and the various defuzzification methods.
- Unit-IV** Decision Making in Fuzzy Environment-Individual decision making. Multiperson decision making. Multicriteria decision making. Multistage decision making.
- Unit-V** Fuzzy ranking methods. Fuzzy linear programming.

M.Sc./M.A. Course (Fourth Semester)  
PAPER-III (C)  
Mathematical Epidemiology

Max. Marks – 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the key concepts of infectious -disease transmission and control.
2. Explore models of different types of infectious disease, including influenza, TB, SARS, and vector-borne diseases.
3. Understand the concept of basic reproduction number and techniques to calculate  $R_0$  and derive its expression using various methods.
4. Analyze stability of the disease free and endemic equilibria.
5. Understand the concept of multi-strain disease dynamics, competitive exclusion and coexistence of two-strain diseases.

**Contents:**

**UNIT-I**

**Epidemic models:** Introduction to epidemic models, simple Kermack-McKendrick epidemic model, models with exposed period, treatments models, an influenza model, quarantine-isolation models. An SIR model with a general infectious period, the age of infection epidemic model, models with disease deaths, a vaccination model.

**UNIT-II**

**Models for endemic diseases:** A model for diseases with no immunity, the SIR model with births and deaths, some applications: Herd immunity, age of infection, the inter-epidemic period, epidemic approach to endemic equilibrium, the SIS model with births and deaths, temporary immunity, diseases population control.

**UNIT-III**

**Techniques for Computing  $R_0$ :** Building complex epidemiological models, stages related to disease progression, control strategies, pathogen or host heterogeneity. Jacobian Approach for the Computation of  $R_0$ , examples in which the Jacobian reduces to a  $2 \times 2$  matrix, Routh-Hurwitz criteria, failure of the Jacobian approach, the next-generation Approach.

**UNIT-IV**

**Analysis of Complex ODE Epidemic Models (Global Stability):** Introduction, local analysis of the SEIR model, global stability via Lyapunov functions, Lyapunov-Kasovskii-Lasalle stability theorems, global stability of equilibria of the SEIR model, Hopf bifurcation in higher dimensions, backward bifurcation, example of backward bifurcation and multiple equilibria.

Handwritten signatures and scribbles at the top of the page, including the word "Page" written upside down.

**UNIT-V**  
**Multistrain Disease Dynamics:** Competitive Exclusion Principle, two-strain epidemic SIR model, the strain-one- and strain-two-dominance equilibria and their stability, the competitive exclusion principle, Multistrain Diseases-Mechanisms for Coexistence, analyzing two-strain models with coexistence, existence and stability of the disease-free and two dominance equilibria, existence of the coexistence equilibrium, computing the invasion numbers using the next-generation approach.

M.Sc./M.A. Course (Fourth Semester)  
PAPER-IV (A)  
Operations Research (II)

Max. Marks 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Investigate the concept of dynamic programming problems.
2. Formulate and solve of linear programming model of game theory.
3. Understand integer programming problem and solve using optimization techniques.
4. Understand the queuing system. Formulate and solve the queuing theory models.
5. Extend the knowledge of programming problem from linear to nonlinear.

**Contents:**

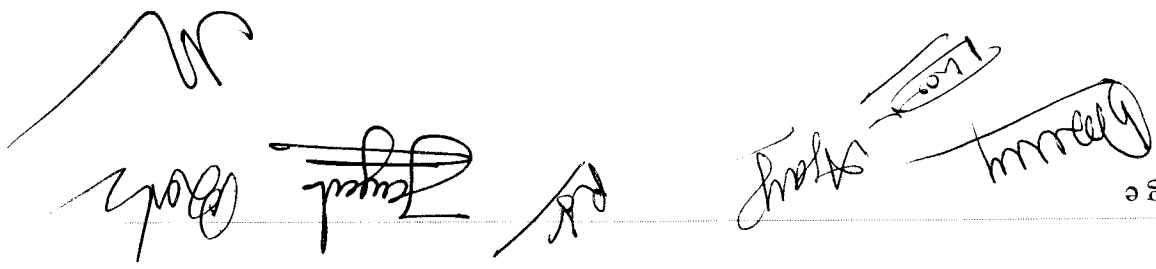

**Unit-I** Dynamic Programming, recursive equation approach, dynamic linear programming approach, Deterministic and Probabilistic Dynamic programming.

**Unit-II** Game Theory-Two-Person, Zero-Sum Games. Games with Mixed Strategies. Graphical . Solution. Solution by Linear Programming.

**Unit-III** Integer Programming-Pure and Mixed Integer Programming Problem, Gomory's All-I P.P. Method, Construction of Gomory's Constraints, Fractional Cut Method-All Integer LPP, Fractional Cut Method- Mixed Integer LPP, Branch and Bound Technique.

**Unit-IV** Queuing system: Deterministic Queuing system, probability distribution in Queuing, classification of Queuing models, Poission Queuing system.

**Unit-V** Nonlinear Programming-One/and Multi-Variable Unconstrained Optimization. Kuhn-Tucker Conditions for Constrained Optimization. Quadratic Programming. Separable Programming. I Convex Programming. Non-convex Programming.

M.Sc./M.A. Course (Fourth Semester)  
PAPER-IV (B)  
Wavelets (II)

Max Marks - 80

**Learning Outcomes:** At the end of the course, the students will be able to :

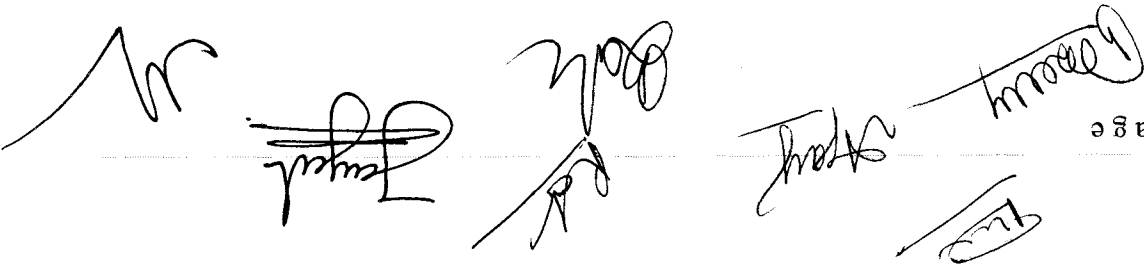

1. Understand the characterizations of wavelets.
2. Characterize MRA wavelets
3. Understand and apply reconstruction formula and the Balian-Low theorem for frames.
4. Understand and apply discrete transforms and algorithms.
5. Understand and apply reconstruction and reconstruction algorithms for wavelets.

**Contents:**

- Unit-I** Characterizations in the theory of wavelets-The basic equations and some of its applications.
- Unit-II** Characterizations of MRA wavelets, low-pass filters and scaling functions. Non-existence of smooth wavelets in  $H^2(\mathbb{R})$ .
- Unit-III** Frames - The reconstruction formula and the Balian-Low theorem for frames. Frames from translations and dilations. Smooth frames for  $H^2(\mathbb{R})$ .
- Unit-IV** Discrete transforms and algorithms-The discrete and the fast Fourier transforms. The discrete and the fast cosine transforms.
- Unit-V** The discrete version of the local sine and cosine bases. Decomposition and reconstruction algorithms for wavelets.

PAPER - V (A)

Programming in C (with ANSI features) (II)  
Theory and Practical

Max. Marks. 100

(Theory-70 + Practical-30)

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand data storage classes and ANSI rules for the syntax and semantics of the storage-class.

2. Understand pointer arithmetic and various sorting algorithms.

3. Declare and call functions and the C processor.

4. Understand structure and union and dynamic memory allocation

5. Understand the I/O file operators, standard library for I/O.

**Contents:**

**Unit-I** Storage Classes-Fixed vs. Automatic Duration. Scope. Global variables.

The register Specifier. ANSI rules for the syntax and Semantics of the

storage-class keywords.

**Unit-II** Pointers Pointer Arithmetic. Passing Pointers as Function Arguments.

Accessing Array Elements through Pointers. Passing Arrays as

Function Arguments. Sorting Algorithms. Strings. Multidimensional

Arrays. Arrays of Pointers. Pointers to Pointers.

**Unit-III** Functions-Passing Arguments. Declarations and Calls. Pointers to

Functions. Recursion. The main Function. Complex Declarations. The

C Preprocessor-Macro Substitution. Conditional Compilation. Include

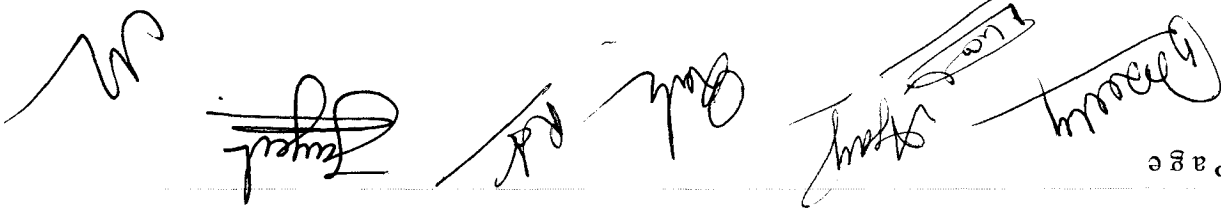

Facility. Line Control.

**Unit-IV** Structures and Unions-Structures. Dynamic Memory Allocation.

Linked Lists. Unions, enum Declarations.

**Unit-V** Input and Output-Streams, Buffering. The <Stdio.h> Header File.

Error Handling. Opening and Closing a File. Reading and Writing Data.

Selecting an I/O Method. Unbuffered I/O Random Access. The standard library for Input/Output.

### Practical Examination Scheme

Max. Marks - 30  
Practical (two)  
Viva  
Sessional  
05 Marks  
20 Marks (10 marks each)  
05 Marks  
Time Duration - 3 Hrs.

M.Sc./M.A. Course (Fourth Semester)  
PAPER-V (B)  
Graph theory-II

Max. Marks – 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the concept of perfectness, Ramsey numbers and graphs.
2. Understand the concept of graphs with groups.
3. Understand the concept of polynomials: colour, chromatic, bivariate etc.
4. Extend the concept of graph enumeration its properties.
5. Understand the concept of digraphs and networks in graph theory.

**Contents:**

Unit-I: Ramsey Theory: Perfectness-preserving operations, Forbidden Subgraph orientations, Ramsey numbers and Ramsey graphs.

Unit-II: Groups: Permutation groups, The automorphism group, graphs with given group, symmetry concepts, pseudo-similarity and stability, spectral studies of the Automorphism group.

Unit-III: Polynomials and Graph Enumeration: The colour polynomials, The chromatic polynomial, The bivariate colouring polynomials.

Unit-IV: Graph Enumeration: Co-chromatic (co-dichromatic) graphs and chromatically unique graphs, Graph Enumeration.

Unit-V: Digraphs & Networks: Digraphs, Types of connectedness, Flows in Networks, Menger's and Konig's Theorem, Degree sequences.

M.Sc./M.A. Course (Fourth Semester)  
PAPER-V (C)  
Cryptography

Max. Marks – 80

**Learning Outcomes:** At the end of the course, the students will be able to :

1. Understand the difference between classical and modern cryptography.
2. Learn the fundamentals of cryptography, including Data and Advanced Encryption Standards (DES & AES) and RSA.
3. Understand and apply Hash and compression functions.
4. Encrypt and decrypt messages using block ciphers, sign and verify messages using well-known signature generation and verification algorithms.
5. Apply public crypto systems, in particular, RSA.

**Contents:**

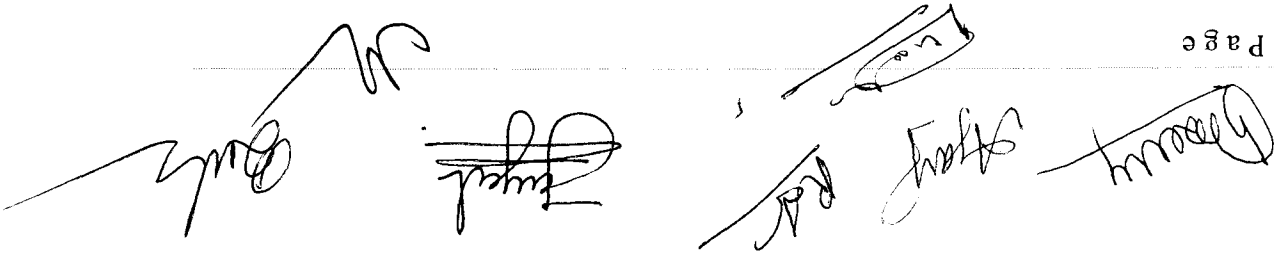

Unit-I: The Shift Cipher, The Substitution Cipher, The Affine Cipher, The Vigenere Cipher, The Hill Cipher, The Permutation Cipher, Stream & Block ciphers.  
Unit-II: Shannon's Theory of Perfect Secrecy, Vernam One Time Pad, Random Numbers, Mode of operations in block cipher, the Data Encryption Standard (DES), Feistel ciphers, the Advanced Encryption Standard(AES), Prime Number Generation, Fermat Test, Miller Rabin Test.  
Unit-III: Public Key Cryptography, RSA Cryptosystem, Factoring problem, Rabin Exchange Protocol, Discrete Logarithm Problem (DLP), ElGamal Cryptosystem, Quadratic Residue Problem, Diffie-Hellman (DH) Key Exchange Protocol, Elliptic Curve Cryptosystem (ECC),  
Unit-IV: Hash and Compression Functions, Security of Hash Functions, Iterated Hash Functions, SHA-1, MD-5, Message Authentication Codes.  
Unit-V: Digital Signature, RSA Signature, ElGamal Signature, Digital Signature Algorithm (DSA), ECDSA, Identification and Authentication.

**Scheme of Examination**

**M.A./M.Sc. Mathematics (Previous)**

**Session 2023-24 & Onwards**

There shall be five papers in M.A./ M.Sc. (Previous) Mathematics. All are compulsory. Each theory paper (Paper I – Paper V) will have 100 Marks and divided into five units. However, there will be internal choice in each Unit. **Overall tally of marks will be 500.**

Paper	Description	Marks
I	Advanced Abstract Algebra	100
II	Real Analysis	100
III	Topology	100
IV	Complex Analysis	100
V	Advanced Discrete Mathematics	100

# DETAILS OF SYLLABUS

## PAPER - I

### Advanced Abstract Algebra

**Unit-I** Groups - Normal and Subnormal series. Composition series. Jordan-Holder theorem. Solvable groups. Nilpotent groups.

Field theory- Extension fields. Algebraic and transcendental extensions. Separable and inseparable extensions. Normal extensions. Perfect fields. Finite fields. Primitive elements. Algebraically closed fields.

**Unit-II** Automorphisms of extensions. Galois extensions. Fundamental theorem of Galois theory. Solution of polynomial equations by radicals. Insolvability of the general equation of degree 5 by radicals.

**Unit-III** Modules - Cyclic modules. Simple modules. Semi-simple modules. Schur's Lemma. Free modules. Noetherian and artinian modules and rings-Hilbert basis theorem. Wedderburn Artin theorem. Uniform modules, primary modules, and Noether-Lasker theorem.

**Unit-IV** Linear transformations- Algebra of linear transformations, characteristic roots, Matrices of linear transformations.

Canonical Forms - Similarity of linear transformations. Invariant subspaces. Reduction to triangular forms. Nilpotent transformations. Index of nilpotency. Invariants of a nilpotent transformation. The primary decomposition theorem. Jordan blocks and Jordan forms.

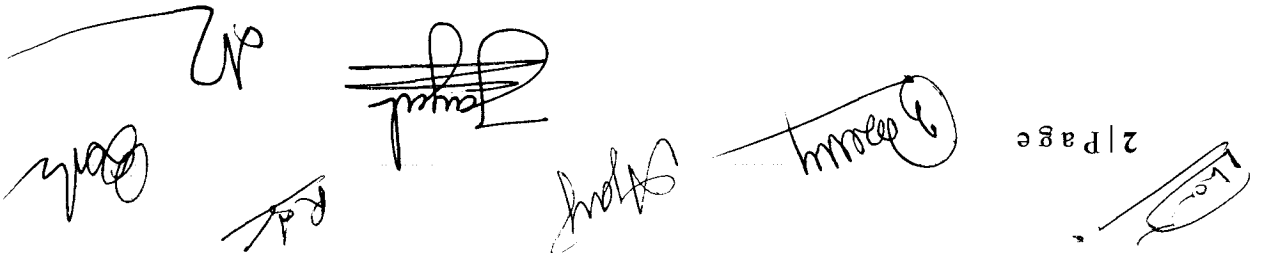

**Unit-V** Smith normal form over a principal ideal domain and rank. Fundamental structure theorem for finitely generated modules over a Principal ideal domain and its applications to finitely generated abelian groups. Rational canonical form. Generalized Jordan form over any field.

### Books Recommended:

15. D.S. Passman, A Course in Ring Theory, Wadsworth and Brooks/Cole Advanced Books and Softwares, Pacific groves. California, 1991.

**PAPER- II**  
**Real Analysis**

**Unit-I** Definition and existence of Riemann-Stieltjes integral, Properties of the Integral, integration and differentiation, the fundamental theorem of Calculus, integration of vector-valued functions, Rectifiable curves.

**Unit-II** Rearrangement of terms of a series, Riemann's theorem. Sequences and series of functions, pointwise and uniform convergence, Cauchy criterion for uniform convergence, Weierstrass M-test, Abel's and Dirichlet's tests for uniform convergence, uniform convergence and continuity, uniform convergence and Riemann-Stieltjes integration, uniform convergence and differentiation, Weierstrass approximation theorem. Power series, uniqueness theorem for power series, Abel's and Tauber's theorems.

**Unit-III** Functions of several variables, linear transformations, Derivatives in an open subset of  $\mathbb{R}^n$ , Chain rule, Partial derivatives, interchange of the order of differentiation, Derivatives of higher orders, Taylor's theorem, Inverse function theorem, Implicit function theorem. Jacobians, extremum problems with constraints, Lagrange's multiplier method, Differentiation of integrals. Partitions of unity, Differential forms, Stoke's theorem.

**Unit-IV** Lebesgue outer measure. Measurable sets. Regularity. Measurable functions. Borel and Lebesgue measurability. Non-measurable sets. Integration of Non-negative functions. The General integral. Integration of Series. Riemann and Lebesgue Integrals. The Four derivatives. Functions of bounded variations. Lebesgue Differentiation Theorem. Differentiation and Integration.

**Unit-V** Measures and outer measures, Extension of a measure. Uniqueness of Extension. Completion of a measure. Measure spaces. Integration with respect to a measure. The  $L^p$ -spaces. Convex functions. Jensen's inequality. Holder and Minkowski inequalities. Completeness of  $L^p$ , Convergence in Measure, Almost uniform convergence.

**Recommended Books:**

1. Principle of Mathematical Analysis By Walter Rudin(3rd edition) McGraw-Hill, 1976, International student edition.
2. Real Analysis By H.L.Roydon, Macmillan Pub.Co.Inc.4th Edition, New York .1962.

15. Serge Lang, Analysis I & II, Addison-Wesley Publishing Company, Inc. 1969.
16. Inder K. Rana, An Introduction to Measure and Integration, Norosa Publishing House, Delhi, 1997.
17. Walter Rudin, Real & Complex Analysis, Tata McGraw-Hill Publishing Co.Ltd. New Delhi, 1966.

Handwritten signatures and initials are present on the page, including a signature that appears to be 'Rajesh' and another that looks like 'Ravi'. There are also several other scribbles and initials, some of which are circled or underlined.

## PAPER-III Topology

**Unit-I** Countable and uncountable sets. Infinite sets and the Axiom of Choice. Cardinal numbers and its arithmetic. Schroeder-Bernstein theorem. Cantor's theorem and the continuum hypothesis. Zorn's lemma, well-ordering theorem. Definition and examples of topological spaces. Closed sets. Closure. Dense subsets. Neighbourhoods. Interior, exterior and boundary. Accumulation points and derived sets. Bases and sub-bases. Subspaces and relative topology. Alternate methods of defining a topology in terms of terms of Kuratowski Closure Operator and Neighbourhood Systems.

**Unit-II** Continuous functions and homeomorphism. First and Second Countable spaces. Lindelof's theorems. Separable spaces. Second countability and separability. Separation axioms  $T_0, T_1, T_2, T_{3/2}, T_4$ ; their Characterizations and basic properties. Urysohn's lemma, Tietze extension theorem.

**Unit-III** Compactness. Continuous functions and compact sets. Basic properties of Countably compact sets. Local compactness and one point compactification. Stone-Cech compactification. Compactness in metric spaces. Equivalence of compactness, countable compactness and sequential compactness in metric space. Connected spaces. Connectedness on the real line. Components. Locally connected spaces.

**Unit-IV** Tychonoff product topology in terms of standard sub-base and its characterizations. Projection maps. Separation axioms and product spaces. Connectedness and product spaces. Compactness and product spaces (Tychonoff's theorem). Countability and product spaces. Embedding and metrization. Embedding lemma and Tychonoff embedding. The Urysohn metrization theorem. Metrization theorems and Paracompactness-Local finiteness. The Nagata-Smirnov metrization theorem. Paracompactness. The Smirnov metrization theorem.

**Unit-V** The fundamental group and covering spaces-Homotopy of paths. The fundamental group. Covering spaces. The fundamental group of the circle and the fundamental theorem of algebra. Nets and filter. Topology and convergence of nets. Hausdorffness and nets. Compactness and nets. Filters and their convergence. Canonical way of converting nets to filters and vice-versa. Ultra-filters and Compactness.

The bottom of the page contains several handwritten signatures and scribbles. From left to right, there is a signature that appears to be 'Mw', a signature that appears to be 'R.K.', a signature that appears to be 'S. Singh', a signature that appears to be 'Rajesh', and a signature that appears to be 'Rajesh' written inside a hand-drawn oval. There are also some other scribbles and lines.

# PAPER-IV Complex Analysis

**Unit-I** Complex integration, Cauchy-Goursat, Theorem, Cauchy's integral formula, Higher order derivatives, Morera's Theorem, Cauchy's inequality and Liouville's theorem. The fundamental theorem of algebra, Taylor's theorem, Maximum modulus principle, Schwarz lemma, Laurent's series, Isolated singularities, Meromorphic functions, The argument principle, Rouché's theorem Inverse function theorem.

**Unit-II** Residues, Cauchy's residue theorem, Evaluation of integrals, Branches of many valued functions with special reference to  $\arg z$ ,  $\log z$  and  $z^a$ , Bilinear transformations, their properties and classifications, Definitions and examples of Conformal mappings, Spaces of analytic functions, Hurwitz's theorem, Montel's theorem Riemann mapping theorem.

**Unit-III** Weierstrass' factorisation theorem, Gamma function and its properties, Riemann Zeta function, Riemann's functional equation, Runge's theorem, Mittag-Leffler's theorem, Analytic Continuation, Uniqueness of direct analytic continuation, Uniqueness of analytic continuation along a curve, Power series method of analytic continuation Schwarz Reflection Principle, Monodromy theorem and its consequences, Harmonic functions on a disk, Harnack's inequality and theorem, Dirichlet Problem, Green's function.

**Unit-IV** Canonical products, Jensen's formula, Poisson-Jensen formula, Hadamard's three circles theorem, Order of an entire function, Exponent of Convergence, Borel's theorem, Hadamard's factorization theorem.

**Unit-V** The range of an analytic function, Bloch's theorem, The Little Picard theorem, Schottky's theorem, Montel Caratheodory and the Great Picard theorem, Univalent functions, Bieberbach's conjecture (Statement only) and the "1/4-theorem."

## Recommended Books:

15. S.Ponnusamy, Foundations of Complex Analysis, Narosa Publishing House, 1997.

Advanced Discrete Mathematics

PAPER-V

**Unit-I** Formal Logic-Statements. Symbolic Representation and Tautologies. Quantifiers, Predicates and Validity. Propositional Logic. Semigroups & Monoids-Definitions and Examples of Semigroups and monoids (including those pertaining to concatenation operation). Homomorphism of semigroups and monoids. Congruence relation and Quotient Semigroups. Subsemigroup and submonoids. Direct Products. Basic Homomorphism Theorem.

**Unit-II** Lattices-Lattices as partially ordered sets. Their properties. Lattices as Algebraic Systems. Sublattices, Direct products, and Homomorphisms. Some Special Lattices e.g., Complete, Complemented and Distributive Lattices. Boolean Algebras-Boolean Algebras as Lattices. Various Boolean Identities. The Switching Algebra example. Subalgebras, Direct Products and Homomorphisms. Join-Irreducible elements, Atoms and Minterms. Boolean Forms and Their Equivalence. Minterm Boolean Forms, Sum of Products Canonical Forms. Minimization of Boolean Functions. Applications of Boolean Algebra to Switching Theory (using AND, OR & NOT gates). The Karnaugh Map Method.

**Unit-III** Graph Theory-Definition of (Undirected) Graphs, Paths, Circuits, Cycles, & Subgraphs. Induced Subgraphs. Degree of a vertex. Connectivity. Planar Graphs and their properties. Trees. Euler's Formula for connected planar Graphs. Complete & Complete Bipartite Graphs. Kuratowski's Theorem (statement only) and its use. Spanning Trees, Cut-sets, Fundamental Cut-sets, and Cycle. Minimal Spanning Trees and Kruskal's Algorithm. Matrix Representations of Graphs. Euler's Theorem on the Existence of Eulerian Paths and Circuits. Directed Graphs. In degree and Out degree of a Vertex.

**Unit-IV** Weighted undirected Graphs. Dijkstra's Algorithm..strong Connectivity & Warshall's Algorithm. Directed Trees. Search Trees. Tree Traversals. Introductory Computability Theory-Finite State Machines and their Transition Table Diagrams. Equivalence of finite State Machines. Reduced Machines. Homomorphism. Finite Automata. Acceptors. Non-deterministic Finite Automata and equivalence of its power to that of Deterministic Finite Automata. Moore and mealy Machines. Turing Machine and Partial Recursive Functions.

**Unit-V** Grammars and Languages-Phrase-Structure Grammars. Rewriting Rules. Derivations. Sentential Forms. Language generated by a Grammar. Regular, Context-Free, and Context Sensitive Grammars and Languages. Regular sets, Regular Expressions and the Pumping Lemma. Kleene's Theorem. Notions of Syntax Analysis, Polish Notations.

Handwritten signatures and initials at the top of the page, including a large signature on the left, a signature in the middle, and a signature on the right that appears to be 'Ravi'.

Conversion of Infix Expressions to Polish Notations. The Reverse Polish Notation.

**Recommended Books:**

The image shows several handwritten signatures and initials in black ink. From left to right, there are two signatures, a set of initials 'R.V.', a signature that appears to be 'Sawad', a signature that appears to be 'S. Manohar', and a signature that appears to be 'S. Manohar' with a circled '1' next to it. There is also a small rectangular stamp or mark above the 'S. Manohar' signature.

Pt. Ravishankar Shukla University, Raipur

## Scheme of Examination

M.A./M.Sc. Final (MATHEMATICS)

Session 2023-24 & Onwards

There shall be five papers. Each paper shall have 100 marks. Overall tally of marks will be 500.

Paper	Description	Marks
I	Integration Theory & Functional Analysis	100
II	Partial Differential Equations & Mechanics	100
III	Graph Theory	100
IV	Operations Research	100
V	Fuzzy Sets and their applications	100

(Dr. Dipesh Patel)  
Lect  
Dr. Haren (Sachin)

# Details of Syllabus

## PAPER - I

### INTEGRATION THEORY AND FUNCTIONAL ANALYSIS

MAX. MARKS - 100

#### Integration Theory:

Unit-I. Signed measure. Hahn decomposition theorem, mutually singular measures. Radon-Nikodym theorem. Lebesgue decomposition. Riesz representation theorem. Extension theorem (Carathéodory), Lebesgue-Stieltjes integral, product measures, Fubini's theorem. Differentiation and Integration. Decomposition into absolutely continuous and singular parts.

Unit-II. Baire sets. Baire measure, continuous functions with compact support. Regularity of measures on locally compact spaces. Integration of continuous functions with compact support, Riesz-Markoff theorem.

#### Functional Analysis :

Unit-III. Normed linear spaces. Banach spaces and examples. Quotient space of normed linear spaces and its completeness, equivalent norms. Riesz Lemma, basic properties of finite dimensional normed linear spaces of bounded linear transformations, dual linear transformations, normed linear spaces of bounded linear transformations, dual spaces with examples.

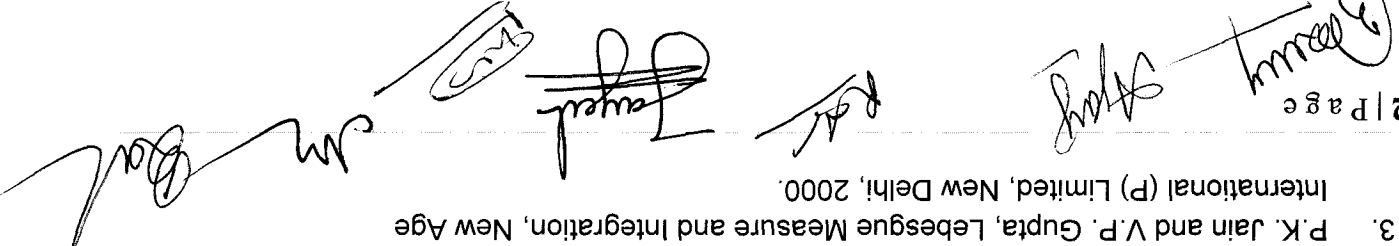

Unit-IV. Uniform boundedness theorem and some of its consequences. Open mapping and closed graph theorems. Hahn-Banach theorem for real linear spaces, complex linear spaces and normed linear spaces. Reflexive spaces. Weak Sequential Compactness. Compact Operators. Solvability of linear equations in Banach spaces. The closed Range Theorem. Unit-V. Inner product spaces. Hilbert spaces. Orthonormal Sets. Bessel's inequality. Complete orthonormal sets and Parseval's identity. Structure of Hilbert spaces. Projection theorem. Riesz representation theorem. Adjoint of an operator on a Hilbert space. Reflexivity of Hilbert spaces. Self-adjoint operators, Positive, projection, normal and unitary operators. Abstract variational boundary-value problem. The generalized Lax-Milgram theorem.

#### BOOK RECOMMENDED :

1. P.R. Halmos, Measure Theory, Van Nostrand, Princeton, 1950.
2. B. Choudhary and Sudarsan Nanda, Functional Analysis with Applications, Wiley Eastern Ltd., 1989.
3. H.L. Royden, Real Analysis, Macmillan Publishing Co. Inc., New York, 4th Edition, 1993.

#### REFERENCES :

27. A.E. Taylor, Introduction to Functional Analysis, John Wiley and Sons, New York, 1958.
28. K.Yosida, Functional Analysis, 3rd edition Springer-Verlag, New York, 1971.
29. J.B. Conway, A Course in Functional Analysis, Springer-Verlag, New York, 1990.
30. Walter Rudin, Functional Analysis, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 1973.
31. A. Wilansky, Functional Analysis, Blaisdell Publishing Co., 1964.
32. J. Tinsley Oden & Leszek F. Demkowicz, Applied Functional Analysis, CRC Press Inc., 1996.
33. A.H. Siddiqui, Functional Analysis with Applications, Tata McGraw-Hill Publishing Company Ltd., New Delhi.

**PARTIAL DIFFERENTIAL EQUATIONS AND MECHANICS**

MAX.MARKS - 100

**Partial Differential Equations:**

Unit-I : Examples of PDE. Classification.

Transport Equation-Initial value Problem. Non-homogeneous Equation.

Laplace's Equation-Fundamental Solution, Mean Value Formulas, Properties of Harmonic Functions, Green's Function, Energy Methods.

Heat Equation-Fundamental Solution, Mean Value Formula, Properties of Solutions,

Energy Methods.

Wave Equation-Solution by Spherical Means, Non-homogeneous Equations, Energy

Methods.

Unit-II: Nonlinear First Order PDE-Complete Integrals, Envelopes, Characteristics, Hamilton

Jacobi Equations (Calculus of Variations, Hamilton's ODE, Legendre Transform, Hopf-Lax

Formula, Weak Solutions, Uniqueness), Conservation Laws (Shocks, Entropy Condition,

Lax-Oleinik formula, Weak Solutions, Uniqueness, Riemann's Problem, Long Time

Behaviour)

Representation of Solutions-Separation of Variables, Similarity Solutions (Plane and

Travelling Waves, Solitons, Similarity under Scaling), Fourier and Laplace Transform, Hopf-

Cole Transform, Hodograph and Legendre Transforms, Potential Functions, Asymptotics

(Singular Perturbations, Laplace's Method, Geometric Optics, Stationary Phase,

Homogenization), Power Series (Non-characteristic Surfaces, Real Analytic Functions,

Cauchy-Kovalevskaya Theorem).

**Mechanics**

**Analytical Dynamics:**

Unit-III: Generalized coordinates. Holonomic and Non-holonomic systems. Scleronomic and

Rheonomic systems. Generalized potential. Lagrange's equations of first kind. Lagrange's

equations of second kind. Uniqueness of solution. Energy equation for conservative fields.

Hamilton's variables. Donkin's theorem. Hamilton canonical equations. Cyclic coordinates.

Routh's equations. Poisson's Bracket. Poisson's Identity. Jacob-Poisson Theorem.

Motivating problems of calculus of variations, Shortest distance. Minimum surface of

revolution. Brachistochrone problem. Isoperimetric problem. Geodesic. Fundamental

lemma of calculus of variations. Euler's equation for one dependent function and its

generalization to (i) 'n' dependent functions, (ii) higher order derivatives. Conditional

extremum under geometric constraints and under integral constraints.

4 Page  
 (Hemant Singh)

RAJ

Tajul

M. S.

**Unit-IV :** Hamilton's Principle. Principle of least action. Poincare Cartan Integral invariant. Whittaker's equations. Jacob's equations. of Lee Hwa Chung's theorem. Statement of Lee Hwa Chung's theorem.

Canonical transformations and properties of generating functions. Hamilton-Jacobi equation. Jacobi theorem. Method of separation of variables. Lagrange Brackets. Condition of canonical character of a transformation in terms of Lagrange brackets and Poisson brackets, invariance of Lagrange brackets and Poisson brackets under canonical transformations.

**Gravitation:**

**Unit-V :** Attraction and potential of rod, disc, spherical shells and sphere. Surface integral of normal attraction (application & Gauss' theorem). Laplace and Poisson equations. Work done by selfattracting systems. Distributions for a given potential. Equipotential surfaces. Surface and solid harmonics. Surface density in terms of surface harmonics.

**BOOK RECOMMENDED :**

1. L.C. Evans, Partial Differential Equations, Graduate Studies in Mathematics, Volume 19, AMS, 1998.

2. F. Gantmacher, Lectures in Analytic Mechanics, MIR Publishers, Moscow, 1975.
3. C.R.Mondal, Classical Mechanics, Prentice Hall of India
4. S.L. Loney, An Elementary Treatise on Statics, Kalyani Publishers, New Delhi, 1979.

**REFERENCES :**

1. A.S. Ramsey, Dynamics Part II, The English Language Book Society and Cambridge University Press, 1972.
2. H. Goldstein, Classical Mechanics (2<sup>nd</sup> edition), Narosa Publishing House, New Delhi.
3. I.M. Gelfand and S.V. Fomin, Calculus of Variations, Prentice Hall.
4. A.S. Ramsey, Newtonian Gravitation, The English Language Book Society and the Cambridge University Press.
5. Narayan Chandra Rana & Pramod Sharad Chandra Joag, Classical Mechanics, Tata McGraw Hill, 1991.
6. Louis N. Hand and Janet D. Finch, Analytical Mechanics, Cambridge University Press, 1998.

The bottom of the page contains several handwritten signatures and scribbles. From left to right, there is a signature that appears to be 'Rohit', a signature that appears to be 'M', a signature that appears to be 'Rohit', a signature that appears to be 'Rohit', a signature that appears to be 'Rohit', and a signature that appears to be 'Rohit'.

Unit-I: Operations on graphs, matrices and vector spaces:

Topological operations, Homeomorphism, homomorphism, contractions, derived graphs, Binary operations, matrices and vector spaces : The adjacency matrix, The determinant and the spectrum, Spectrum properties, The incidence matrix, cycle space and Bond space, Cycle bases and cycle graphs.

Unit-II: Colouring packing and covering:

Vertex coverings, critical graphs, Girth and chromatic number, uniquely colourable graphs, edge-colourings, Face colourings and Beyond, The achronatic and the Adjoint Numbers. Setting up of combinational formulations, the classic pair of duals, Gallai, Norman-Rabin Theorems, Clique parameters, The Rosenfeld Numbers.

Unit-III: Perfect Graphs and Ramsey Theory:

Introduction to the "SPGC", Triangulated (Chordal) graphs, Comparability graphs, Interval graphs, permutation graphs, circular arc graphs, split graphs, weakly triangulated graphs, perfectness-preserving operations, Forbidden Subgraph orientations, Ramsey numbers and Ramsey graphs.

Unit-IV: Groups, Polynomials and Graph Enumeration:

Permutation groups, The automorphism group, graphs with given group, symmetry concepts, pseudo-similarity and stability, spectral studies of the Automorphism group. The colour polynomials, The chromatic polynomial, The bivariate colouring polynomials, co-chromatic (co-dichromatic) graphs and chromatically unique graphs, Graph Enumeration.

Unit-V: Digraphs & Networks:

Digraphs, Types of connectedness, Flows in Networks, Menger's and Konig's Theorem, Degree sequences.

Handwritten signatures and marks at the bottom of the page, including a large signature that appears to be 'Rajesh' and other smaller marks.

PAPER - IV  
OPERATIONS RESEARCH

MAX.MARKS – 100

Unit-I. Operations Research and its Scope. Necessity of Operations Research in Industry. Linear Programming-Simplex Method. Theory of the Simplex Method. Duality and Sensitivity Analysis.

Other Algorithms for Linear Programming-Dual Simplex Method. Parametric Linear Programming. Upper Bound Technique. Interior Point Algorithm. Linear Goal Programming. Unit-II. Transportation and Assignment Problems.

Network Analysis-Shortest Path Problem. Minimum Spanning Tree Problem. Maximum Flow Problem. Minimum Cost Flow Problem. Network Simplex Method. Project Planning and Control with PERT-CPM.

Unit-III. Dynamic Programming-Deterministic and Probabilistic Dynamic programming. Game Theory-Two-Person, Zero-Sum Games. Games with Mixed Strategies. Graphical. Solution. Solution by Linear Programming.

Integer Programming-Branch and Bound Technique.

Unit-IV. Applications to Industrial Problems-Optimal product mix and activity levels. Petroleum refinery operations. Blending problems. Economic interpretation of dual linear programming. problems. Input-output analysis. Leontief system. Indecomposable and Decomposable economies.

Unit-V. Nonlinear Programming-One/and Multi-Variable Unconstrained Optimization. Kuhn-Tucker Conditions for Constrained Optimization. Quadratic Programming. Separable Programming. Convex Programming. Non-convex Programming.

REFERENCES :

8. Prem Kumar Gupta and D.S. Hira, Operations Research-An Introduction. S. Cliland & Company Ltd., New Delhi.

*Handwritten signatures and marks:*  
- Top left: A signature.  
- Top center: A signature with a large flourish.  
- Top right: A signature.  
- Far right: A signature.

9. N.S. Kambo, Mathematical Programming Techniques, Affiliated East-West Press Pvt. Ltd., New Delhi, Madras

10. UNDO Systems Products (Visit website <http://www.Hndo.com/productsf.html>)

- a. UNDO (the linear programming solver)
- b. UNDO Callable Library (the premier optimisation engine)
- c. LINGO (the linear, non-linear, and integer programming solver with Mathematical modelling language)
- d. What's Best ! (the spreadsheet add-in that solves linear, non-linear, and integer Problems).

All the above four products are bundled into one package to form the Solver Suite. For more details about any of the four products one has to click on its name.

- e. Optimisation Modelling with UNDO (5<sup>th</sup> edition) by Linus Schrage.
- f. Optimisation Modelling with LINGO by Unus Schrage.

More details available on the Related Books page.

**PAPER - V  
FUZZY SETS AND THEIR APPLICATIONS**

**MAX.MARKS – 100**

**UNIT-I** Fuzzy sets-Basic definitions, n-level sets. Convex fuzzy sets. Basic operations on fuzzy sets. Types of fuzzy sets. Cartesian products. Algebraic products. Bounded sum and difference, t-norms and t-conorms. The Extension Principle- The Zadeh's extension principle. Image and inverse image of fuzzy sets.

**UNIT-II** Fuzzy numbers. Elements of fuzzy arithmetic. Fuzzy Relations and Fuzzy Graphs-Fuzzy relations on fuzzy sets. Composition of fuzzy relations. Min-Max composition and its properties. Fuzzy equivalence relations. Fuzzy compatibility relation. Fuzzy graphs. Similarity relation.

**UNIT-III** Fuzzy relation equations. Possibility Theory-Fuzzy measures. Evidence theory. Necessity measure. Possibility measure. Possibility distribution. Possibility theory and fuzzy sets. Possibility theory versus probability theory.

**UNIT-IV** Fuzzy Logic-An overview of classical logic, Multivalued logics, Fuzzy propositions. Fuzzy quantifiers. Linguistic variables and hedges. Inference from conditional fuzzy propositions, the compositional rule of inference. Approximate Reasoning-An overview of Fuzzy expert system. Fuzzy implications and their selection. Multiconditional approximate reasoning. The role of fuzzy relation equation.

**UNIT-V** An introduction to Fuzzy Control-Fuzzy controllers. Fuzzy rule base. Fuzzy inference engine. Fuzzification. Defuzzification and the various defuzzification methods (the centre of area, the centre of maxima, and the mean of maxima methods). Decision Making in Fuzzy Environment-Individual decision making. Multiperson decision making. Multicriteria decision making. Multistage decision making. Fuzzy ranking methods. Fuzzy linear programming.
